ABSTRACT:

PROBLEM TO BE SOLVED: To provide an accelerating agent composition having required performance, required stability and required compressive strength and functioning to every type of cement.

SOLUTION: The accelerating agent composition suitable for a cement composition for spraying and composed of a formulation of essential components 1-3, that is a component 1; aluminum sulfate, a component 2: at least one kind of alkanol amine and alkylene diamine and a component 3; hydrofluoric acid, optionally contains at least one kind of components 4-7, that is, a component 4; at least one kind of hydroxide, carbonate and sulfate of sodium, potassium and lithium, a component 5; an aliphatic carboxylic acid, a component 6; amorphous aluminum hydroxide and a component 7; phosphoric acid. Where, at least one kind of the component 4 or the component 5 is existed and

the components are existed in the proportion of 30-60% component 1, 0.1-15% component 2, 0.2-8.0% component 3, $\leq 15\%$ component 4, $\leq 15\%$ component 5, $\leq 15\%$ component 6 and $\leq 3\%$ component 7.
